TJW Education & Experience

1983 *Univ. of Iowa, BS Mech. Engrg.*

1983-89 **3M Co. Polyester Film Division**

1989-99 **3M Company Web Handling Staff Consultant**

1994-99 **3M representative to Oklahoma St. Univ. Web Handling Research Center**

1995-99 **Led 300+ Web Process Design Reviews**

1997-99 **3M Corporate WH Technology Leader**

1999 **Univ. of Minn., MS Mgmt. of Technology**

1999-2041 **TJWalker + Associates Inc.
Process Engineering & Technology Management,
Specializing in Web Handling Processes**

TJWA Experience

Products / Materials

- ✓ Pressure Sensitive Adhesive Tapes
- ✓ Release Liners / films and papers
- ✓ Magnetic Products / PET, PEN
- ✓ Abrasives and Micro-Abrasives
- ✓ Flexible Electronics / Polyimide, Foils
- ✓ Flexible Solar / PET, Stainless Steel
- ✓ Flexible Packaging / Paper, Film, Foils
- ✓ Roofing Products
- ✓ Imaging Films / PET
- ✓ Reflective Products
- ✓ Batteries / Films and Foils
- ✓ Pharmaceutical
- ✓ Carbon Composites
- ✓ Paper-Like Films
- ✓ PTFE Films
- ✓ Specialty Fabrics

Welcome to Webhandling.com WH NEWS: More Workshops! I am excited to announce the offering of three more workshops from the webhandling.com team, all combining seminar with on-equipment demonstrations at Optimation's Media Conveyance Facility in Rochester, NY. Web Handling Workshop - Aug. 23-25, 2011 Web Tension and Speed Control Workshop - Sept. 20-21, 2011 Roller Performance Workshop - Sept. 22-23, 2011 Please join us for this practical, unique, and comprehensive web handling training. PFFC Web Lines Column Archive by Topic

Web Lines Archive: Links to Paper, Film, and Foil Converter

I've written over 100 columns for the converting industry trade journal Paper, Film, and Foil Converter. All are archived at www.pffc-online.com in reverse chronological order.

Most people are searching for an answer, so I have organized the links to my PFFC columns by topic with description of each below.

Topics/Titles	Date, and Description
Web Properties	
The Long & the Short of Web Bending	Sep03: How much force is required to bend a web? How does the force to bend the web change with span length (the distance between rollers)?
Who Likes Film?	Jan05: Why do customers like products made with films? What are the advantages and disadvantages from a process engineering viewpoint?
Twisting: Twist & Shout	Jan07: How far can you twist a web before the center goes slack? Why is this common twisting specification not conservative enough?
Bending: Don't Get Bent Out of Shape	Feb07: How far can you bend a web until an edge goes slack? How much force does it take?
Traction	
Optimizing Traction: Goldilocks and the	Aug02: A high level of web-roller traction will prevent slip and scratch problems. A low level of web-roller traction may prevent

Web Lines

Customers like films because they are cool. Films can be clear, thin, shiny, clean, and elastic. Product designers like films because they are functional. Films can improve a product's break strength, tear resistance, and gas barrier performance. Process people like films because...wait. Do process people like films?

Ask a process person whether he or she likes to run films or papers and many will answer "paper." The first run of a thin film on a line designed for paper will be fraught with waste—waste from scratching, winding, and wrinkling. Yikes! Maybe process people don't like films. But since customers and product designers like films

TopWeb 2.0 software
includes models for:

- Roll stresses
- Wrinkling
- Bearing drag
- Roller inertia
- Laminate curl
- Bowed roller spreading
- Concave roller design

Abbott Apps

Topic

Air gap between web and roller
 Heat sealing via Induction
 Heat sealing via Jaws
 Curl induced by lamination
 Roller Deflection under load
 Diffusion into wound rolls
 Dictionary of web terms
 Library of web handling
 Deformation of rubber roll
 Spreading of a web
 Control loop simulation
 Predicting web wrinkles
 Roll conversion productivity
 Calculating roll sizes
 Troubleshooting web wrinkles
 Choice of Web Tension

The Ultimate Roll and Web Defect Troubleshooting Guide

WITH GLOSSARY

R. Duane Smith

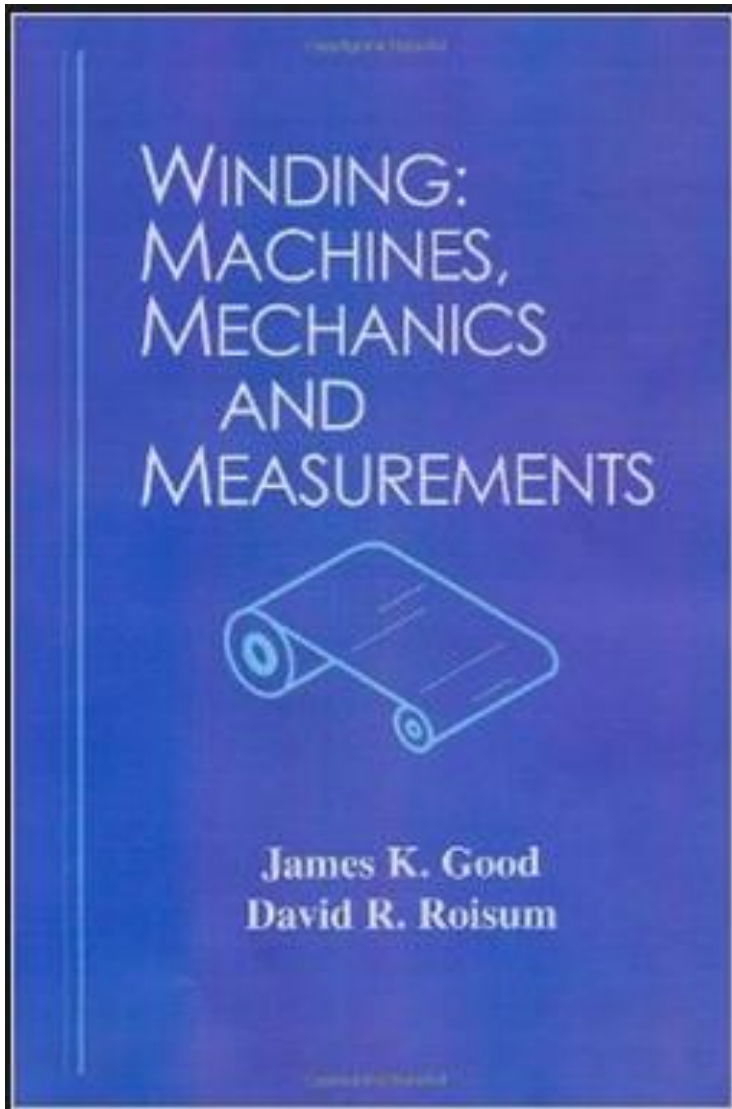

Alan Hadlock · Doug Howard · Bob LaPlant · Ted Lightfoot · Tony Lyons
Dave Roisen · Reinhold Schable · Tim Walker · Dave Rumson

Each of the 224 defects has concise information which provides:

- A description of the defect
- An illustration of the defect
- The synonyms or “also known as” terms commonly used
- Cross references for these synonyms in index
- Common causes of the defect
- Common remedies of the defect
- Other sources of information published on the defect
